

ARSHAD CHAUDHARY

[in](#) [LinkedIn](#) | [Github](#) | [Portfolio](#) | [Email](#) | [+91 9819077081](#)

Software Engineer focused on backend development, with experience building APIs, authentication systems, and database-driven applications. Built a distributed P2P system handling chunk replication and fault recovery across Docker-simulated nodes.

PROJECTS

Distributed File Sharing & Task System (P2P + Redis + Queue + Docker) | Node.js, Redis, Docker | [Github](#)

- Built a peer-to-peer file sharing system with chunk-based transfer and decentralized node discovery.
- Designed a messaging layer using a custom queue with Redis for pub/sub communication between nodes.
- Handled peer failures across 3+ simulated Docker nodes using retry logic, replication, and eventual consistency via data synchronization.
- Containerized services using Docker to simulate multiple nodes and test distributed behavior locally.

DAO-Based Bug Bounty Platform | Solidity, Smart Contracts, MERN Stack | [Github](#)

- Built a bug bounty platform using smart contracts to handle reward distribution and governance.
- Implemented fund locking, on-chain payouts, and role-based access control for different users.
- Developed a dashboard to manage bounties, submissions, and voting.
- Secured **1st Runner-Up** in a competitive hackathon among multiple teams.

PC Parts Configurator | Java, PostgreSQL | [Github](#)

- Built a desktop application to suggest compatible PC components based on user input and compatibility constraints.
- Designed and queried a PostgreSQL database for storing component data and validating configurations.

E-Learning Platform | Flutter & Dart | [Github](#)

- Built a mobile application with role-based authentication, user onboarding, and course management using Firebase.
- Designed assessment flows with chapter-level tests and implemented user progress tracking across modules.
- Developed admin features for managing course content and monitoring user activity within the platform.

Object Detection & Dimension Estimation | Python, Flutter, OpenCV, YOLO | [Github](#)

- Built a mobile application with a Python backend for real-time object detection and classification using OpenCV and YOLO.
- Integrated a two-stage estimation pipeline combining computer vision outputs with Gemini LLM for age and dimension estimation.

EXPERIENCE

Flutter Developer Intern (MSD ENGINEERING - THE FIRE WALA)

Dec 2024 – Mar 2025

- Worked on an e-learning platform used in a real environment, handling authentication, data storage, and analytics using Firebase.
- Improved features based on user feedback and added admin workflows for content and progress tracking.
- Optimized UI performance and ensured responsiveness across devices.

President, Coder's Clique (Association for Computing Machinery Chapter)

Jul 2025 – Present

- Led a student team to organize hackathons and technical events for 330+ participants.
- Managed a 40+ member team across planning, sponsorships, and event execution.

Member, Web - Team (Association for Computing Machinery Chapter)

Jun 2024 – Jun 2025

- Built and deployed the Webathon hackathon website, supporting registrations for 400+ participants.
- Maintained the ACM chapter website and added features for event tracking and member engagement.

SKILLS

Languages: C, C++, Java, Python, JavaScript, C#

Backend: Node.js, Express.js, REST APIs, Authentication & Authorization, Redis, Message Queues

Frontend: React.js, Next.js, Tailwind CSS

Databases: MongoDB, PostgreSQL, Weaviate

Tools & Platforms: Git, GitHub, Postman, Firebase, Figma, Netlify, Vercel, Render

EDUCATION

Bachelor of Engineering (B.E.) in Information Technology – M. H. Saboo Siddik College of Engineering **(8.7 CGPA)**

Nov 2022 – Present
